+WoundDesk

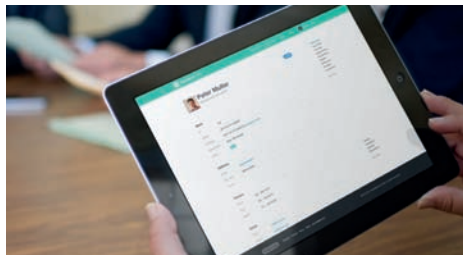

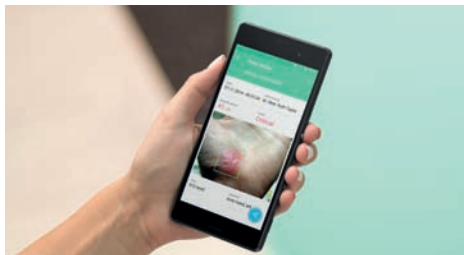

Join the Future of **Mobile Wound Care**

to reduce administration costs, documentation errors
— and get more time for your patients.

wounddesk.com

Access and document patient wound data — Anywhere at anytime

Developed by clinicians for clinicians, +WoundDesk offer an integrated wound assessment and documentation solution at the point of care. +WoundDesk was designed to be simple, fast and intuitive. No special training is required; it is easy to use and incorporated into your daily wound care routine.

+WD Mobile App

With our regulatory compliant mobile app, documentation, non-invasive automatic measurements and images are captured at the bedside. All information is automatically transferred to the health enabled cloud via a secure connection, so the data is collected in 30% of the time compared to manual documentation methods.

+WD Wound Report

When you need support in your wound treatment or would like a real-time feedback on the findings, +WoundDesk provides you with a quick way to share patient wound assessment reports (including vital data, allergies, images, measurements, assessments, and treatment records) with external involved wound specialists.

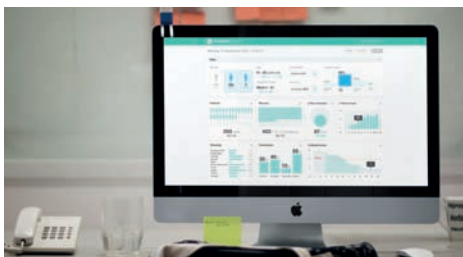

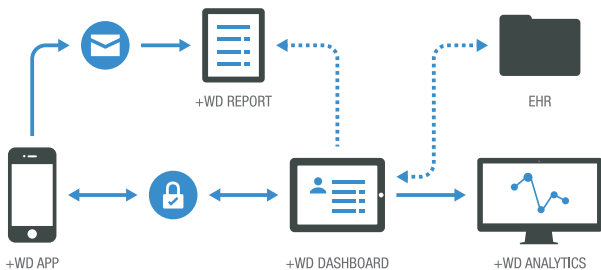

+WD Online Dashboard

+WoundDesk has made it easy for you to access and manage your team and all your wound care patients from any location in a simple to use online dashboard. Optimized for viewing on your PC or tablet, the secure and clinician-focused dashboard will give you a quick breakdown of patients' progress over time.

+WD Open Health API

The +WoundDesk API allows you to exchange the collected wound data between our secure, health-compliant cloud server and your existing EHR system. Need a custom integration of our HL7 and DICOM based solution? Let us know! Our team works with you to identify the right path to integration.

+WD Wound Analytics

+WoundDesk provides powerful data analytics to help you determine better treatment pathways for improved accuracy in diagnoses, outcomes and lower care costs. +WoundDesk aggregates and anonymizes patient data before running it through sophisticated statistical analysis to create meaningful real-time insights for care providers.

+WD Training & Help Desk

+WoundDesk provides on-site and online training services, plus training materials in the form of manuals and video tutorials. Depending on your needs, a dedicated support team is available at any time, allowing you to instantly report and track your support queries from anywhere.

Clinical Validation

+WoundDesk has been tested in several clinical trials (in Switzerland), is part of the wound care solutions at Cambrai Hospital (France) and contribute to research at National and Kapodistrian University of Athens (Greece). A clinical study published by the International Society for Telemedicine & eHealth demonstrates reliability and accuracy of the +WoundDesk solution.

Bank grade Security and high Privacy

Keeping patient data secure is the highest priority at +WoundDesk, which is why we built +WoundDesk to exceed industry standards. +WoundDesk combines AES encryption for all protected health information (PHI) storage and transmission with tight process and infrastructure controls to comply with health regulations.
